

This captivating workshop is all about our one and only Moon. From it's influence on our daily lives to the question of what it is made of, we take a closer look at our celestial companion. We embrace this truly exciting era where we will put humans back on the Moon and make real roots there.

KNOWLEDGE

Before getting a glimpse of the Moon's craters in the telescope, we take a tour of the Moon, learn what we found out last time and learn why we are going back.

STRUCTURE

In the first hour, we will deliver a talk and have time for questions. In the second hour we will use telescopes to zoom in to the details of the surface.

CLOUDY PLAN

If the weather is not in our favour and the Moon is not visible, we will continue take a look at our Moon and see how it measures up to other moons.

This expert-led workshop is suitable for KS2-5 audiences.

Our session leaders all have PhDs in Astronomy and love questions!

We require:

- a screen to project on
- desk space to write
- an outside space for observing

Participants should wear clothes appropriate for outside observing. Solar activity packs are also available from £5.00 per student.

Price: £150.00 + travel costs

BOOK NOW!

To book or discuss your Mission Astro workshop, contact Dr Sarah Crick on sarah@justgoodscience.org 2-hour session.
Group sizes up
to 50 students.
1 prize given
per group.

WARNING!

This session opens up lots of big questions and some myths will be busted. We sincerely apologise for any tears cried as a result of the Moon not being made of cheese.
