

HOT CHOC STAR HOP

This interactive workshop brings the magic of exploring the night sky to you. A time to take a moment to ponder where we are in the universe and how to find treasures up above. We'll explore planets, and moons, patterns and galaxies, and ignite a passion for sky exploration that can last a lifetime.

KNOWLEDGE

Before looking through the telescopes, we will take time to learn about the constellations, asterisms, our Moon and some of the planets visible right now.

STRUCTURE

In the first hour, we will deliver a talk and have time for questions. In the second hour we'll wrap up warm and stargaze to see some real gems.

CLOUDY PLAN

If the weather is not in our favour and the stars are not visible, we will use the wonder of technology to show you the sky digitally.

This expert-led workshop is suitable for KS2-5 audiences. Our session leaders all have PhDs in Astronomy and love questions!

We require:

- a screen to project on
- desk space to write
- an outside space for observing

Participants should wrap up warm for the evening cold. Stargazing activity packs are also available from £5.00 per student.

Price: £150.00 + travel costs

BOOK NOW!

To book or discuss your Mission Astro workshop, contact Dr Sarah Crick on sarah@justgoodscience.org

2-hour session.
Group sizes up to 50 students.
1 prize given per group.

INSIDE TIP

We recommend that this workshop is served with a good hearty cup of hot chocolate! For best results, add a slice of scrumptious cake!
