Asteroids orbit the Earth.

True

False

2

Asteroids orbit the Earth.

True

False

3

The Earth orbits the Sun.

True

False

3

The Earth orbits the Sun.

True

False

4

The Sun orbits the centre of the Milky Way Galaxy.

True

False

4

The Sun orbits the centre of the Milky Way Galaxy.

True

False

5

The spin of the Earth causes the seasons.

True

False

5

The spin of the Earth causes the seasons.

True

False

6

The more massive an individual space object is, the more spherical it is.

True

False

6

The more massive an individual space object is, the more spherical it is.

True

False

7

The force that keeps the Moon in orbit around the Earth is gravity.

True

False

7

The force that keeps the Moon in orbit around the Earth is gravity.

True

False

8

The Sun's light can reach the surface of the entire Earth at exactly the same time.

True

False

8

The Sun's light can reach the surface of the entire Earth at exactly the same time.

True

False

9

The Moon is always visible
in the sky at night time.

True

False

9

The Moon is always visible
in the sky at night time.

True

False

10

If you looked at the Moon from Australia instead of the UK, it would look like it's upside down.

True

False

10

If you looked at the Moon from Australia instead of the UK, it would look like it's upside down.

True

False

11

If you looked at the sky from Australia instead of the UK, you'd see exactly the same stars.

True

False

11

If you looked at the sky from Australia instead of the UK, you'd see exactly the same stars.

True

False
